

HotSheet™ is a voice-activated hands-free technology that aids police officers in tracking multiple vehicles, as well as assist with post incident reconstruction. This product is instrumental in creating containment circles to help pinpoint criminals at or around the scene of a crime.

scene of crimes and to identify vehicles which have appeared at crime scenes. When multiple events are reconstructed and license plate data that is collected and compared, the probability of identifying repeat offenders, such as Serial Snipers, RSO Child Abductors, Serial Armed Robbers, Drive-by-Shooters, Serial Violent Criminals, and

Officers use speech recognition software to check and catalog license plate data. The software provides search and analysis tools for reconstruction of incidents. The software can analyze up to twenty license plates per minute for each responding officer, much faster than the paper hot sheet version that most jurisdictions use. Cars with wireless network connections can update the database from the field. HotSheet™ checks National Crime Center Wanted Files of up to two million

HotSheet™ provides additional hands free voice command interface for a laptop computer for officer safety. HotSheet™ has a basic change screen that is embedded and additional custom voice commands can provide hands free

- Running HotSheet™ captured license plates through the existing Computer Aided Dispatch System
- Providing hands free commands of 'on scene' and 'on traffic'
- Runs on Windows Operating System

Ideal for mobile officers, the Voyager 510-USB Bluetooth Headset System features a USB Bluetooth adapter that, with the Voyager 510 headset, enables instant, wireless access to HotSheet. Exclusive multipoint technology lets you seamlessly transition between multiple wireless devices, software and mobile phones. And with Plantronics PerSonoCall® software included, you can be notified of incoming calls and answer/end calls directly from the headset, where ever justice calls.

About KRATOS Defense & Security Solutions

Kratos provides Command, Control, Communications, Computer, Intelligence, Surveillance and Reconnaissance (C4ISR) engineering and technical services that improve and extend critical capabilities, such as high performance communication; gathering, processing, and dissemination of situation information; decision quality and speed of command; and interoperability.

Kratos Systems extends the use of information and communication technology in defense systems in order to improve operational capabilities and cost efficiency. Kratos is a recognized leader for its world class analytical support and systems engineering in the area of C4ISR.
