

HotSheet™ is a voice-activated hands-free technology that aids police officers in tracking multiple vehicles, as well as assist with post incident reconstruction. This product is instrumental in creating containment circles to help pinpoint criminals at or around the scene of a crime.

### HotSheet™ Assists With Two Critical Functions:

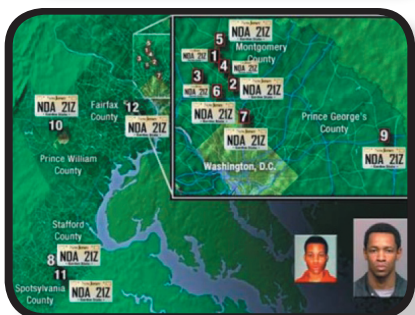

- License plate status—Real-time, local listings of stolen license plates.
- Post Incident Reconstruction—Automatic database creation of all license plates run by law-enforcement.

HotSheet™ information is collected in the field to inform law enforcement of vehicles at the scene of crimes and to identify vehicles which have appeared at crime scenes repeatedly. When multiple events are reconstructed and license plate data that has been gathered is compared, the probability of identifying repeat offenders, such as serial killers, grows exponentially. HotSheet™ works against Serial Snipers, RSO Child Abductions, Arsonists, Serial Armed Robbers, Drive-By-Shooters, Serial Violent Criminals, and Stolen Vehicles.

### Speech Recognition Software

Officers use speech recognition software to check and catalog license plates to provide search and analysis tools for reconstruction of incidents. HotSheet™ can analyze up to twenty license plates per minute for each responding patrol car — a rate much faster than the paper hot sheet version that most jurisdictions currently use. Cars with Internet connections can update the database frequently while in the field. HotSheet™ checks NCIC Wanted Files of up to two million license plates.

### HotSheet™ Hands-Free Voice Commands

HotSheet™ provides additional hands free voice command interface with the in-vehicle computer for officer safety. HotSheet™ has a basic change screen window command embedded and additional custom voice commands can provide hands free features including:

- Running HotSheet™ captured license plates through the existing Computer Aided Dispatch System
- Providing hands free commands of 'on scene' and 'on traffic'
- Runs on Windows Operating System

### Plantronics Voyager™ Bluetooth Headset System

Ideal for mobile officers, the Voyager 510-USB Bluetooth Headset System features a USB Bluetooth adapter that, with the Voyager 510 headset, enables instant, wireless access to HotSheet. Exclusive multipoint technology lets you seamlessly transition between multiple wireless devices, software and mobile phones. And with Plantronics PerSonoCall® software included, you can be notified of incoming calls and answer/end calls directly from the headset, where ever justice calls.

Sound innovation for missions to the moon. And for everyday life on this planet, too.

In 1969, a Plantronics headset carried the historic words from the moon: "That's one small step..." Since then, we've set industry standards for headsets from aviation to space travel. Today, we're the headset of choice in mission-critical applications such as air traffic control and 911 dispatch. This history of sound innovation is the basis for every product we build — whether it's for work, home or on the go.

WFI Government Services, Inc provides systems integration, program management, and other technical services to support the needs of crisis event responders, improve regional facility/campus and building security, and to provide solutions for custom homeland defense or security requirements.
